**Ferro-Film® XP Earns Place on U.S. Military
“Qualified Product List” of VCI Films**

ALSIP, IL – Daubert Cromwell proudly announces that its new Ferro-Film® XP has passed the U.S. government’s highest standards for corrosion inhibitor polyethylene packaging, and has earned status on the prestigious “Qualified Product List.” This is important to military suppliers and contractors who are required to use government-specified packaging to prevent corrosion on valuable equipment during storage and shipment.

Ferro-Film XP, produced in collaboration with Cadillac Products Packaging Company of Troy, MI, meets all requirements of the MIL-PRF-22019 performance specification.

Its non-stick formulation makes it ideal for converting into heat-sealed bags, in the types and sizes as needed for military packaging applications. Print is clean and won’t rub off.

Ferro-Film XP is the latest addition to the Daubert Cromwell line of military-approved corrosion inhibitor products. For more information and pricing on films, papers, or VCI emitters, contact your Regional Sales Manager or call 800-535-3535.
